

TMG Technology Asset Management Insights adds business intelligence to your TAM ecosystem for enhanced asset management decision-making

Features & Benefits

- Designed by TAM specialists to show metrics that matter
- Aggregates data from multiple sources in a single pane of glass
- Show trends over time to map changes in risk profile
- Extensible to cover adjacent business processes such as contracts and procurement

The Problem

Out-of-the-box dashboards in most enterprise ITAM systems provide only basic information on software costs and financial risks, and may not support time-series analysis. Additionally you are limited to the data available within the tool.

The TMG TAM Insights solution

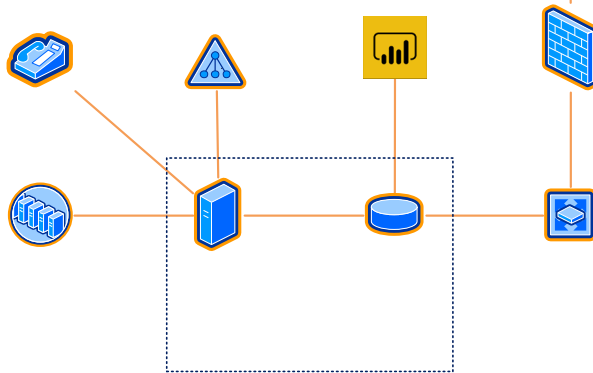

- TMG has developed a subscription-based reporting solution, implemented on customer premises or hosted by TMG. If required a managed service can be added to maintain system health and data currency.
- Data is updated daily and snapshots taken fortnightly / monthly to support time-based analysis.
- Includes business contextual data to allow slicing by publisher, organisation unit or location.
- Includes native connectors to FNMS/Flexera One, ServiceNow and other systems for rapid, lightweight implementation.

Technology Overview

Customer Azure / Office 365 Tenant (if applicable)

Customer Network

TMG Data Adapter collects data on a schedule from source systems and uploads to SQL DB

TMG ITAM DB generates statistics and snapshots data for time-based analysis

FNMS (On-premise or cloud) supplies IT asset management raw data

Optional connection to ITSM system (e.g. ServiceNow) to capture incidents and tasks

Optional connection to data quality solution (e.g. AirTrack) to measure inventory coverage

MS Data Gateway allows data in Power BI Online to be updated from on-premise sources

Azure Service Bus and Gateway Cloud Service handle comms between Power BI and On-premise Data Gateway

Power BI Desktop/App used to view dashboards and reports (if Power BI Online not in use)

Power BI Online allows authenticated users to view ITAM Reporting Dashboards

System Requirements

- TMG ITAM Insights License: Subscription license that provides access to the Data Adapter, ITAM Reporting Database solution and Power BI design (PBIX file)
- Flexera FlexNet Manager (FNMS) On-premise / cloud, ServiceNow SAM Professional or Snow
- .NET Framework 4.6.1 or later
- Windows Server 2016 or later
- Internet Information Server 6 or later
- Microsoft SQL Server 2014 or later
- Microsoft On-premise data gateway (free download) installed on a server with access to internet
- Power BI Professional O365 subscriptions for users who want to view dashboards in Power BI online
