

## The TMG Business Adapter Kit for Flexera FlexNet Manager® takes license compliance management to the next level, optimising your software spend

### Features & Benefits

Reduce license costs and administrative overhead through:

- Current and accurate allocation/exemption
- Timely harvesting
- Application of Product Use Rights
- Charge/show back

### The Problem

Optimising FNMS license positions can be a challenge for several reasons:

- The development effort needed to integrate relevant enterprise and inventory lifecycle data
- The need to manually maintain license allocations and exemptions

### The TMG Business Adapter Kit

TMG has developed an out-of-the-box set of business adapters to enhance enterprise and inventory data in FNMS, seamlessly integrating data from key management systems such as Active Directory and the CMDB, as well as BAs to automate license allocation/exemption. We can also develop custom adapters to suit your needs, for example to integrate HR data.

Business Adapter	Description	Benefits
<b>Active Directory Users</b>	Enhances FNMS user records with properties from AD users, including email address and HR data (if available)	
<b>Active Directory Location</b>	Utilises AD sites and subnets to build location hierarchy and assign devices to locations based on IP address	
<b>Inventory Device Status</b>	Using the CMDB as a source of truth, updates the status of inventory device records, e.g. when retired	
<b>Inventory Device Role</b>	Update the environment/server role for servers in FNMS, based on CMDB, e.g. to reflect non-production usage	
<b>License Exemptions</b>	Update exemption reasons for license allocations, using AD groups or spreadsheets as input	
<b>User Allocation to License</b>	Update user license allocations, using AD groups or other data as input
